

ory (R. Rocha-Chávez and M. Shapiro). 10. Systems of first order partial differential equations—A hypercomplex approach (H. Begehr). 11. To elliptic theory for domains with piecewise smooth boundary in the plane (A.P. Soldatov). 12. Boundary value problems for a system of first order equations of a principle type in the plane (N. Zhura). 13. The stability of the Riemann boundary value problem for vector-valued M -analytic functions (C.-G. Hu and D.-P. Zhang). 14. A class of inverse Hilbert boundary value problems (S.Q. Liu). 15. Cauchy formula, integral of Cauchy type and Hilbert problem for bianalytic functions (Z. Zhen). 16. On uniqueness conditions for entire polyanalytic functions (M.B. Balk and M.Ya. Mazalov). 17. Bi-analytic functions and their applications in elasticity (W. Lin and Y. Zhao). 18. Effect of periodic gasket on a periodic contact problem (X. Li). 19. Singular integral operators and singular quadrature operators for singular integral equations with Hilbert kernel (J. Du). 20. Some co-circular crack problems with cyclic symmetry (J. Lu). 21. The oblique derivative problem for nonlinear parabolic equations of second order with measurable coefficients in a higher dimensional domain (G.-C. Wen). 22. Existence and uniqueness for boundary value contact problems (I.V. Andranov and B.P. Belinskiy). 23. Weakly hyperbolic equations—A modern field in the theory of hyperbolic equations (M. Dreher and M. Reissig). 24. Eigenvalue problems for elliptic type partial differential operators with spectral parameter contained linearly in boundary conditions (B. Belinskiy). 25. On indefinite nonlinear Neumann problems (K. Pflueger). 26. Higher order ordinary differential equations with super-singular points (N. Rajobov). 27. Applications to methods of integrals and function theory to statistics (M. Jin, X. CHen and Z. Yu).

Mastering Algorithms with C. By Kyle Loudon. O'Reilly, Sebastopol, CA. (1999). 540 pages. \$34.95 (diskette included).

Contents:

Preface. I. Preliminaries. 1. Introduction. 2. Pointer manipulation. 3. Recursion. 4. Analysis of algorithms. II. Data structures. 5. Linked lists. 6. Stacks and queues. 7. Sets. 8. Hash tables. 9. Trees. 10. Heaps and priority queues. III. Algorithms. 12. Sorting and searching. 13. Numerical methods. 14. Data compression. 15. Data encryption. 16. Graph algorithms. 17. Geometric algorithms. Index.

Calculating Risks? The Spatial and Political Dimensions of Hazardous Waste Policy. By James Hamilton and W. Kip Viscusi. MIT Press, Cambridge, MA. (1999). 326 pages. \$37.50.

Contents:

Series foreword. Preface. 1. Introduction. 2. Measuring individual risks. 3. Assessing conservatism in individual risk estimates (with P. Christen Dockins). 4. Populations at risk. 5. Costs of conservatism: Cost-effectiveness of site remediations. 6. Are risk regulators "rational"? 7. Environmental equity at superfund sites? 8. Market reactions to site risks (with Ted Gayer). 9. Implementing risk reforms in site remediations. Appendices. A. Assessing human health risks and remediation costs. B. Sample description. Notes. Bibliography. Index.

Random Walks in the Quarter-Plane: Algebraic Methods, Boundary Value Problems and Applications. By Guy Fayolle, Roudolf Iasnogorodski and Vadim Malyshev. Springer-Verlag, Berlin. (1999). 156 pages. \$89.95, DM 139.00, öS 1,015.00, sFr 126.50, GBP 53.50.

Contents:

Introduction and history. 1. Probabilistic background. 2. Foundations of the analytic approach. 3. Analytic continuation of the unknown functions in the genus 1 case. 4. The case of a finite group. 5. Solution in the case of an arbitrary group. 6. The genus 0 case. 7. Miscellanea. References. Index.

Polynomials: An Algorithmic Approach. By Maurice Mignotte and Doru Ștefănescu. Springer-Verlag, Singapore. (1999). 306 pages. \$49.00, DM 98.00, öS 716.00, sFr 89.50, GBP 37.50.

Contents:

Introduction. 1. An introduction to polynomials. 2. Complex polynomials. 3. Polynomials with coefficients in a finite field. 4. Integer polynomials. Bibliography. Notation. List of algorithms. Name index. Subject index.

Supersymmetry and Equivariant de Rham Theory. By Victor W. Guillemin and Shlomo Sternberg. Springer-Verlag, Berlin. (1999). 228 pages. \$59.95, DM 98.00, öS 716.00, sFr 89.50, GBP 37.50.

Contents:

Introduction. 1. Equivariant cohomology in topology. 2. G^+ modules. 3. The Weil algebra. 4. The Weil model and the Cartan model. 5. Cartan's formula. 6. Spectral sequences. 7. Fermionic integration. 8. Characteristic classes. 9. Equivariant symplectic forms. 10. The Thom class and localization. 11. The abstract localization theorem. Appendix. Bibliography. Index.

Efficient Solvers for Incompressible Flow Problems: An Algorithmic and Computational Approach. By Stefan Turek. Springer-Verlag, Berlin. (1999). 352 pages. \$99.00, DM 149.00, öS 1,088.00, sFr 136.00, GBP 57.50 (CD-ROM included).

Contents:

Notation. 1. Motivation for current research. 2. Derivation of Navier-Stokes solvers. 3. Other mathematical components. 4. Numerical comparisons of Navier-Stokes solvers. 5. Conclusions and outlook. 6. The enclosed CD-ROM. Bibliography.
